

IST769 Homework Submission

Name: **Sathish Kumar Rajendiran**

SUID: **666555028**

Email: srajendi@syr.edu

Due Date: **09/07/2021**

Task: **Cassandra and CQL**

Homework #: **9**

Exercise(s):

1. Design your own scenario for which a Cassandra table would be a good solution. Make sure to explain the scenario and the specific characteristics of the scenario which would make Cassandra a good fit. Make sure to follow a query first approach and justify how the partition and cluster keys should be setup

Solution:

-- Objective

Explore Cassandra's data modeling concepts with an example.

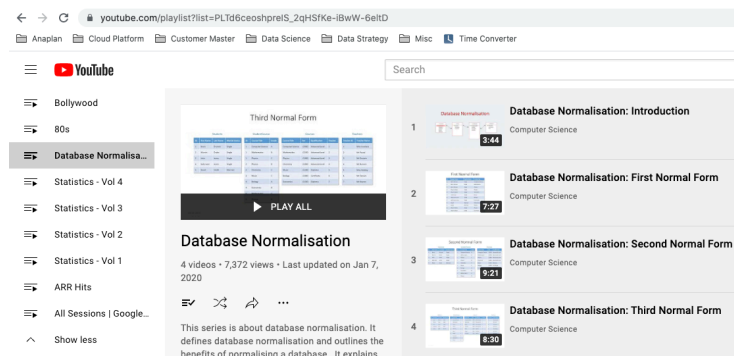

-- Scenario: **Analyzing YouTube Playlist.**

I have 3 personal playlists created as private in YouTube. In this exercise, let's create a keyspace, table and materialized views to explore/query contents. Table to store information such as playlist id, track_url, base_url, category, language, title, year of release and composed by. So, facts like, number of videos posted by category, year released, available contents can be retrieved. In addition, several other attributes can also be added to perform additional analytics.

Keyspace: **Youtube_analytics**

Table: **private_playlist**

Evidence:

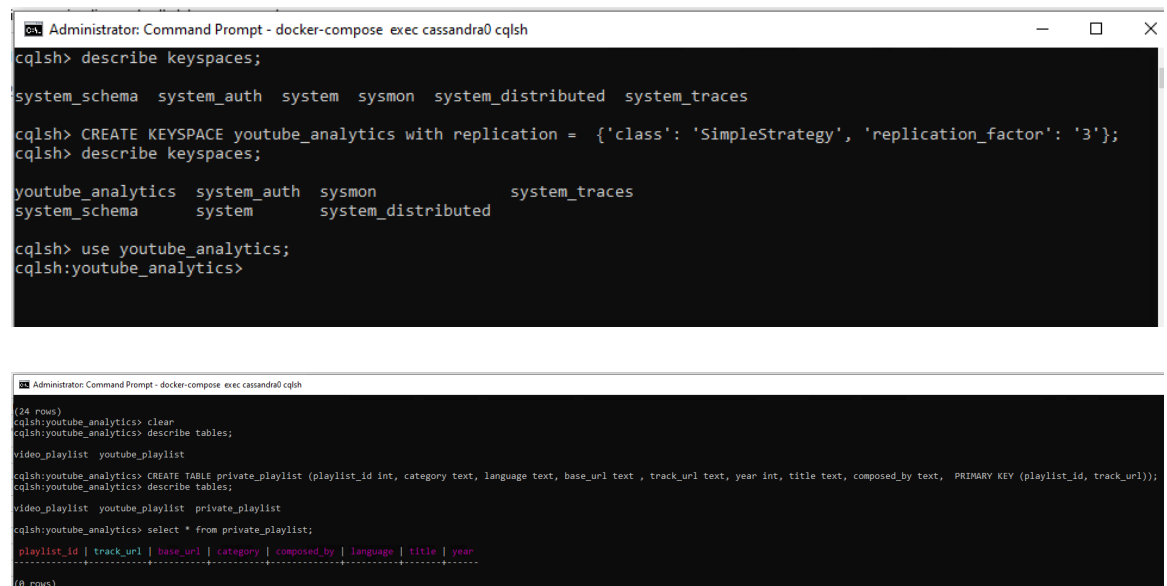

```
Administrator: Command Prompt - docker-compose exec cassandra cqlsh
cqlsh:youtube_analytics> select * from private_playlist;
playlist_id | track_url | base_url | category | composed_by | language | title | year
-----
1 | 4dsPQFCvWGU | PLHz-2xygVmqbXQ1SXFEGzT0hexbh6 | bollywood | shankar | hindi | kajra re | 2005
2 | C8a5Kz2H2E8 | PLHz-2xygVmqbXQ1SXFEGzT0hexbh6 | bollywood | pritam | hindi | khamli | 2010
3 | 72Bae681UDJ | PLHz-2xygVmqbXQ1SXFEGzT0hexbh6 | bollywood | pritam | hindi | crazy kiya re | 2000
4 | 3bn39j-xa-k | PLHz-2xygVmqbXQ1SXFEGzT0hexbh6 | bollywood | devdas | hindi | dola re dola | 2002
5 | A6fBm7-tPX0 | PLnVVEPTNGNXTmmpa68HhL-LT4hynoss | statistics | mathtutordvd | english | what is a population in statistics | 2016
6 | QoqetoV08ae | PLnVVEPTNGNXTmmpa68HhL-LT4hynoss | statistics | mathtutordvd | english | descriptive vs inferential statistics | 2016
7 | bx-vnk6bByik | PLnVVEPTNGNXTmmpa68HhL-LT4hynoss | statistics | mathtutordvd | english | intro to statistics | 2016

11 | jGueOj1moOw | PLHz-2xygVmqbXQ1SXFEGzT0hexbh6 | database normalization | computer science | english | first normal form | 2020
12 | y03oYMDLuEQ | PLHz-2xygVmqbXQ1SXFEGzT0hexbh6 | database normalization | computer science | english | introduction | 2020
(12 rows)
cqlsh:youtube_analytics>
```

2. Create your Cassandra table in CQL based on your scenario from the previous exercise. You should define the columns and data types to suit your scenario in addition to configuring the partition and cluster keys.

Solution:

```
-- CQL to create keyspace
CREATE KEYSPACE youtube_analytics with replication = {'class': 'SimpleStrategy',
'replication_factor': '3'};
-- Choose keyspace
use youtube_analytics;
-- CQL to create table
CREATE TABLE private_playlist (playlist_id int, category text, language text, base_url text,
track_url text, year int, title text, composed_by text, PRIMARY KEY (playlist_id, track_url));
-- CQL to select data from table
SELECT * FROM private_playlist
```

Evidence:

The first screenshot shows the creation of the 'youtube_analytics' keyspace and the 'private_playlist' table. The second screenshot shows the verification steps: clearing the table, describing the tables, and selecting all data from the 'private_playlist' table, which returns 0 rows.

```
Administrator: Command Prompt - docker-compose exec cassandra0 cqlsh
cqlsh> describe keyspaces;

system_schema  system_auth  system  sysmon  system_distributed  system_traces

cqlsh> CREATE KEYSPACE youtube_analytics with replication = {'class': 'SimpleStrategy', 'replication_factor': '3'};
cqlsh> describe keyspaces;

youtube_analytics  system_auth  sysmon  system_traces
system_schema      system       system_distributed

cqlsh> use youtube_analytics;
cqlsh:youtube_analytics>

(24 rows)
cqlsh:youtube_analytics> clear
cqlsh:youtube_analytics> describe tables;

video_playlist  youtube_playlist

cqlsh:youtube_analytics> CREATE TABLE private_playlist (playlist_id int, category text, language text, base_url text , track_url text, year int, title text, composed_by text, PRIMARY KEY (playlist_id, track_url));
cqlsh:youtube_analytics> describe tables;

video_playlist  youtube_playlist  private_playlist

cqlsh:youtube_analytics> select * from private_playlist;

playlist_id | track_url | base_url | category | composed_by | language | title | year
-----|-----|-----|-----|-----|-----|-----|-----
(0 rows)
```

3. Write CQL statements to add data to your table. Add at least 9 records consisting of 3 different partition and cluster keys

Solution:

```
-- CQL to Insert data
INSERT INTO private_playlist (playlist_id, track_url, base_url, category, composed_by, language, title, year) VALUES (1,
'J2Bh68GTUOU', 'PLzHz-2xygVFmqbXQiSXfXEGzTOHnxbh6', 'bollywood', 'pritam', 'hindi', 'crazy kiya re', 2006);

4. Write a CQL statement to create an index or materialized view on your table so that you can set a different partition key to prevent ALLOW FILTERING. Then write a CQL SELECT statement to demonstrate it works as designed.

Solution:

-- create an index on title and verify ALLOW FILTERING behavior

```
CREATE INDEX ix_private_playlist ON youtube_analytics.private_playlist(title);
```

-- retrieve data from table

```
select * from private_playlist where playlist_id = 1 and title = 'kamli' ALLOW FILTERING;
```

```
select * from private_playlist where playlist_id = 1 and title = 'kamli';
```

```
select * from private_playlist where title = 'kamli';
```

Evidence:
