

IST769 Homework Submission

Name: **Sathish Kumar Rajendiran**

SUID: **666555028**

Email: srajendi@syr.edu

Due Date: **09/14/2021**

Task: **Kafka and KSQL**

Homework #:**10**

Exercise(s):

1. Write KSQL to create a stream named **weblogs** from the JSON keys in the **weblogs** Kafka topic.
Make sure to set the **TIMESTAMP** property to the timestamp from the stream.

Solution:

```
-- Create Weblogs STREAM
```

```
CREATE STREAM weblogs (timestamp bigint, browser varchar, OS varchar, uri varchar,
user varchar) WITH (kafka_topic ='weblogs', timestamp ='TimeStamp', value_format ='JSON');
```

Evidence:

```
Administrator: Command Prompt - docker-compose exec ksql-cli ksql http://ksql-server:8088
CLI v5.0.0-SNAPSHOT, Server v5.0.0-SNAPSHOT located at http://ksql-server:8088
Having trouble? Type 'help' (case-insensitive) for a rundown of how things work!
ksql> show streams;
Stream Name | Kafka Topic | Format
-----
ksql> CREATE STREAM weblogs (timestamp bigint, browser varchar, OS varchar, uri varchar, user varchar) WITH (kafka_topic = 'weblogs', timestamp = 'TimeStamp', value_format = 'JSON');
Message
-----
Stream created
ksql> show streams;
Stream Name | Kafka Topic | Format
-----
WEBLOGS    | weblogs   | JSON
ksql> describe weblogs;
Name          : WEBLOGS
Field        | Type
-----
ROWTIME      | BIGINT      (system)
ROWKEY       | VARCHAR(STRING) (system)
TIMESTAMP    | BIGINT
BROWSER     | VARCHAR(STRING)
OS           | VARCHAR(STRING)
URI          | VARCHAR(STRING)
USER         | VARCHAR(STRING)
-----
For runtime statistics and query details run: DESCRIBE EXTENDED <Stream,Table>;
ksql>
```

```
ksql> describe weblogs;
Name          : WEBLOGS
Field        | Type
-----
ROWTIME      | BIGINT      (system)
ROWKEY       | VARCHAR(STRING) (system)
TIMESTAMP    | BIGINT
BROWSER     | VARCHAR(STRING)
OS           | VARCHAR(STRING)
URI          | VARCHAR(STRING)
USER         | VARCHAR(STRING)
-----
For runtime statistics and query details run: DESCRIBE EXTENDED <Stream,Table>;
ksql> select * from weblogs;
1631512192000 | null | 1631512192000 | chrome | win | /services | gigi
1631512195000 | null | 1631512195000 | chrome | osx | / | abby
1631512197000 | null | 1631512197000 | edge | win | / | hank
1631512199000 | null | 1631512199000 | chrome | win | /about | nancy
1631512203000 | null | 1631512203000 | safari | osx | / | otto
1631512212000 | null | 1631512212000 | chrome | osx | / | rose
1631512215000 | null | 1631512215000 | edge | win | /contact | devin
1631512224000 | null | 1631512224000 | chrome | osx | /products | yolanda
1631512229000 | null | 1631512229000 | chrome | win | /products | chris
```

2. Write a KSQL statement create a persistent stream/table called **homepage** which only displays visitors to the root of the website (/). It should display all columns from the **weblogs** stream.

Solution:

```
-- KSQL Statement to create a persistent stream
CREATE STREAM homepage AS SELECT * FROM weblogs WHERE uri = '/';
-- View the data
SELECT * FROM homepage;
```

Evidence:

```
c:\ Administrator: Command Prompt - docker-compose exec ksql-cli ksql http://ksql-server:8088
1631512545000 | null | 1631512545000 | edge | win | /about | walt
1631512552000 | null | 1631512552000 | chrome | win | /blog | elle
^CQuery terminated
ksql> CREATE STREAM homepage AS SELECT * FROM weblogs WHERE uri= '/';
Message
-----
Stream created and running
-----
ksql> show streams;

Stream Name | Kafka Topic | Format
-----
WEBLOGS     | weblogs      | JSON
HOMEPAGE    | HOMEPAGE     | JSON
-----
ksql> describe homepage;

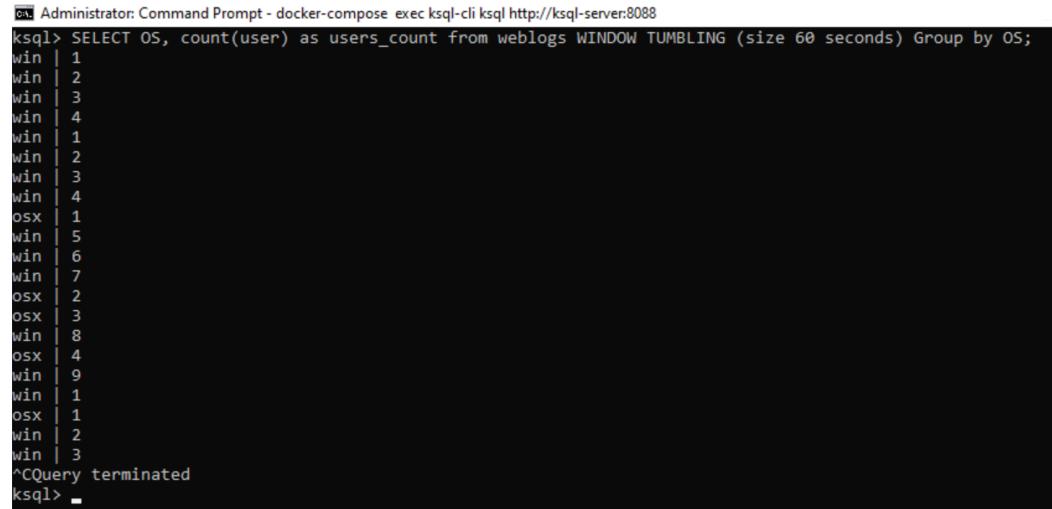

Name          : HOMEPAGE
Field        | Type
-----
ROWTIME      | BIGINT       (system)
ROWKEY       | VARCHAR(STRING) (system)
TIMESTAMP    | BIGINT
BROWSER      | VARCHAR(STRING)
OS           | VARCHAR(STRING)
URI          | VARCHAR(STRING)
USER         | VARCHAR(STRING)
-----
For runtime statistics and query details run: DESCRIBE EXTENDED <Stream,Table>;
ksql> select * from homepage;
1631512696000 | null | 1631512696000 | safari | osx | / | otto
1631512705000 | null | 1631512705000 | firefox | win | / | tosh
```

3. Write a KSQL statement to count operating systems users (os) in 60 second windows. After 60 seconds, the counter should reset, and counts should begin again.

Solution:

```
-- KSQL statement to count the number of operating system users in 60 second window
SELECT OS, count(user) as users_count from weblogs WINDOW TUMBLING (size 60 seconds) GROUP BY OS;
```

Evidence:

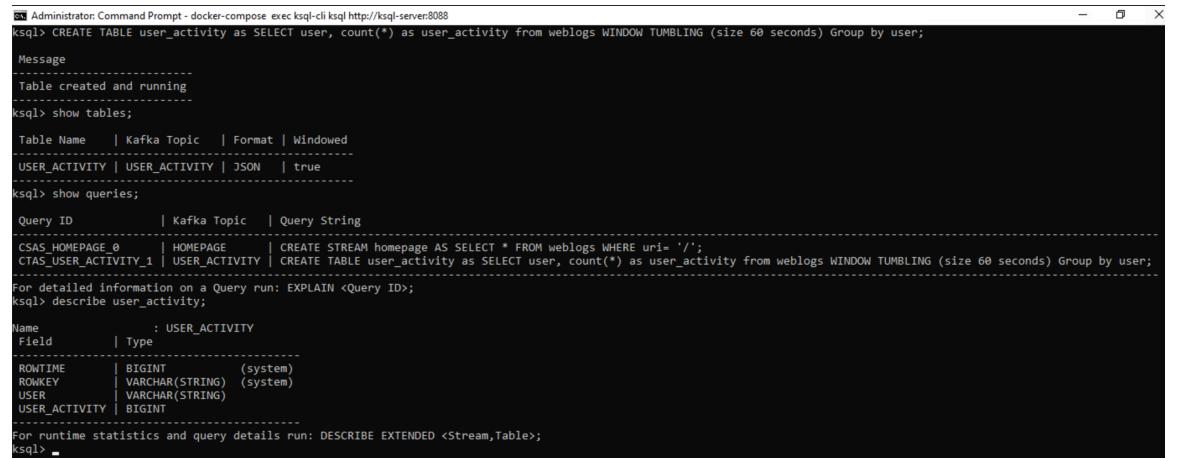

```
Administrator: Command Prompt - docker-compose exec ksql-cli ksql http://ksql-server:8088
ksql> SELECT OS, count(user) as users_count from weblogs WINDOW TUMBLING (size 60 seconds) Group by OS;
win | 1
win | 2
win | 3
win | 4
win | 1
win | 2
win | 3
win | 4
osx | 1
win | 5
win | 6
win | 7
osx | 2
osx | 3
win | 8
osx | 4
win | 9
win | 1
osx | 1
win | 2
win | 3
^CQuery terminated
ksql> -
```

4. Write a KSQL persistent stream/table called **user_activity** which will display a count of user activity on the website within 1-minute sessions.

Solution:

```
-- create KSQL Persistent stream/table
CREATE TABLE user_activity as SELECT user, count(*) as user_activity from weblogs WINDOW
TUMBLING (size 60 seconds) GROUP BY user;
```

Evidence:

```
Administrator: Command Prompt - docker-compose exec ksql-cli ksql http://ksql-server:8088
ksql> CREATE TABLE user_activity as SELECT user, count(*) as user_activity from weblogs WINDOW TUMBLING (size 60 seconds) Group by user;
Message
Table created and running
ksql> show tables;
Table Name | Kafka Topic | Format | Windowed
USER_ACTIVITY | USER_ACTIVITY | JSON | true
ksql> show queries;
Query ID | Kafka Topic | Query String
CSAS_HOMEPAGE_0 | HOMEPAGE | CREATE STREAM homepage AS SELECT * FROM weblogs WHERE uri '/';
CTAS_USER_ACTIVITY_1 | USER_ACTIVITY | CREATE TABLE user_activity as SELECT user, count(*) as user_activity from weblogs WINDOW TUMBLING (size 60 seconds) Group by user;
For detailed information on a Query run: EXPLAIN <Query ID>;
ksql> describe user_activity;
Name          : USER_ACTIVITY
Field         | Type
-----|-----
ROWTIME      | BIGINT           (system)
ROWKEY       | VARCHAR(STRING) (system)
USER         | VARCHAR(STRING)
USER_ACTIVITY | BIGINT
For runtime statistics and query details run: DESCRIBE EXTENDED <Stream,Table>;
ksql> -
```

5. Write a KSQL statement to display users who have more than 1 pages of activity in a 1-minute session.

Solution:

```
-- Display results
Select * from user_activity where user_activity > 1;
```

Evidence:

```
Administrator: Command Prompt - docker-compose exec ksql-cli ksql http://ksql-server:8088
ksql> CREATE TABLE user_activity as SELECT user, count(*) as user_activity FROM weblogs WINDOW TUMBLING (size 60 seconds) Group by user;
Message
Table created and running
ksql> show tables;
Table Name | Kafka Topic | Format | Windowed
USER_ACTIVITY | USER_ACTIVITY | JSON | true
ksql> show queries;
Query ID | Kafka Topic | Query String
CSAS_HOMEPAGE_0 | HOMEPAGE | CREATE STREAM homepage AS SELECT * FROM weblogs WHERE uri= '/';
CTAS_USER_ACTIVITY_1 | USER_ACTIVITY | CREATE TABLE user_activity as SELECT user, count(*) as user_activity FROM weblogs WINDOW TUMBLING (size 60 seconds) Group by user;
For detailed information on a Query run: EXPLAIN <Query ID>;
ksql> describe user_activity;
Name : USER_ACTIVITY
Field | Type
-----|-----
ROWTIME | BIGINT (system)
ROWKEY | VARCHAR(STRING) (system)
USER | VARCHAR(STRING)
USER_ACTIVITY | BIGINT
For runtime statistics and query details run: DESCRIBE EXTENDED <Stream,Table>;
ksql> select * from user_activity where user_activity > 1;
1631513520000 | otto : Window{start=1631513520000 end=-} | otto | 2
1631513520000 | gigi : Window{start=1631513520000 end=-} | gigi | 2
```

769-Win10Docker-srajendi

```
Administrator: Command Prompt - docker-compose exec ksql-cli ksql http://ksql-server:8088
USER_ACTIVITY | BIGINT
For runtime statistics and query details run: DESCRIBE EXTENDED <Stream,Table>;
ksql> select * from user_activity where user_activity > 1;
1631513520000 | otto : Window{start=1631513520000 end=-} | otto | 2
1631513520000 | gigi : Window{start=1631513520000 end=-} | gigi | 2
```
